

## Locator® Accessories

### Level Monitor

- Safeguard irreplaceable biological specimens with the most advanced liquid nitrogen level monitor available.
- Unlike traditional monitoring devices, this ultrasonic device eliminates contact with liquid nitrogen reducing liquid nitrogen loss due to conduction.
- LED level indicator panel continuously displays liquid nitrogen volume in 1/8 increments.
- Removable alarm notifies you of low liquid nitrogen levels even at times when no one is in the building.
- Audible and visual alarms provide early warning of low level conditions. Indicator light flashes when approximately 2" (5 cm) of liquid nitrogen remains in the vessel. An audible alarm sounds in unison with flashing low-level indicator light when level drops to about 1" (2.5 cm).

### Locator Log

- Designed for quick, reliable sample identification storage and relocation.
- Three section format for Locator and Locator Plus systems recordkeeping.
  - Section 1: Serves as a helpful reminder for refilling vessels.
  - Section 2: Locates your samples by identification keys.
  - Section 3: Inventories samples and pinpoints exact location.

### CryoClaw™

- Designed to remove ampules and boxes that have fallen from racks and cans in cryogenic vessels having necks larger than two inches in diameter.
- Reach overhead items or retrieve fallen objects between benches and behind instruments.
