

BATTERY COOLANT REFRACTOMETER 300014

Measures the freezing point of automotive coolants in their current concentration as well as battery charge. Both ethylene glycol and propylene glycol antifreezes can be measured, on separate scales. Battery charge is measured on a third scale using just a few drops of battery electrolyte solution (battery acid). The specific gravity of the battery acid is displayed together with a reading of RECHARGE, FAIR, or GOOD.

Dim: 6 ½" x 1 ½"

Weight: 6.5 oz.

	RANGE	RESOLUTION	ACCURACY
Ethylene glycol	32 ~ -60°F	10°F	+/- 2°F
Propylene glycol	32 ~ -50°F	10°F	+/- 2°F
Battery Acid	1.15 ~ 1.30 specific gravity	0.01
